Computer programmers are the builders of the computing world. They translate software design into code that computers can read, crafting the operating systems and software applications consumers use every day. People's interaction with computers is at an all-time high—familiar desktop models provide a constant stream information and entertainment, while complex systems perform countless behind-the-scenes tasks. The demand for computing power is only growing, opening more career possibilities for people interested in computer programming and applications.

History helps us understand people and societies. History helps us understand change and how the society we live in came to be. Historical circumstances can provide inspiration. History also helps to provide identity, and this is unquestionably one of the reasons all modern nations encourage its teaching. We recognize that everything has a history. "A generation which ignores history has no past and no future."

Mathematics is the most beautiful and most powerful creation of the human spirit. The needs of math arise based on the wants of society. The more complex a society, the more complex the mathematical needs. Pure mathematics is in its own way, the poetry of logical ideas. Mathematics is challenging, rewarding and fun. It is both logical and creative. Students who major in mathematics have a variety of opportunities. The mathematics major prepares students for traditional pursuits such as graduate study, teaching and work as an actuary. Studying maths helps you to develop skills in logical thinking, problem-solving and decision-making, which are valued by employers across many job sectors.

Physics is the science that deals with matter, energy, motion, and force. Physicists are explorers trying to understand the world around them. Professionals with physics degrees are truly versatile. They can also hold engineering roles in laser project, or as research analyst or application engineers. They can even assume computer science roles like systems analyst, software programmer, systems or test engineer with much ease. There are some kind of "hard skills" that make physicists so attractive to employers. They include Research and problem solving, Fluency in using scientific equipment, Refined mathematical skills, Programming skills, Modelling and simulation, Quality control protocol etc.
